Sticky Frog Demo Game Template Documentation

Qookie Games

How to import the project

1- Create a new Unity project (preferably using the Universal 2D Core template).

Do not import this template into another game project to avoid the risk of corrupting your existing project.

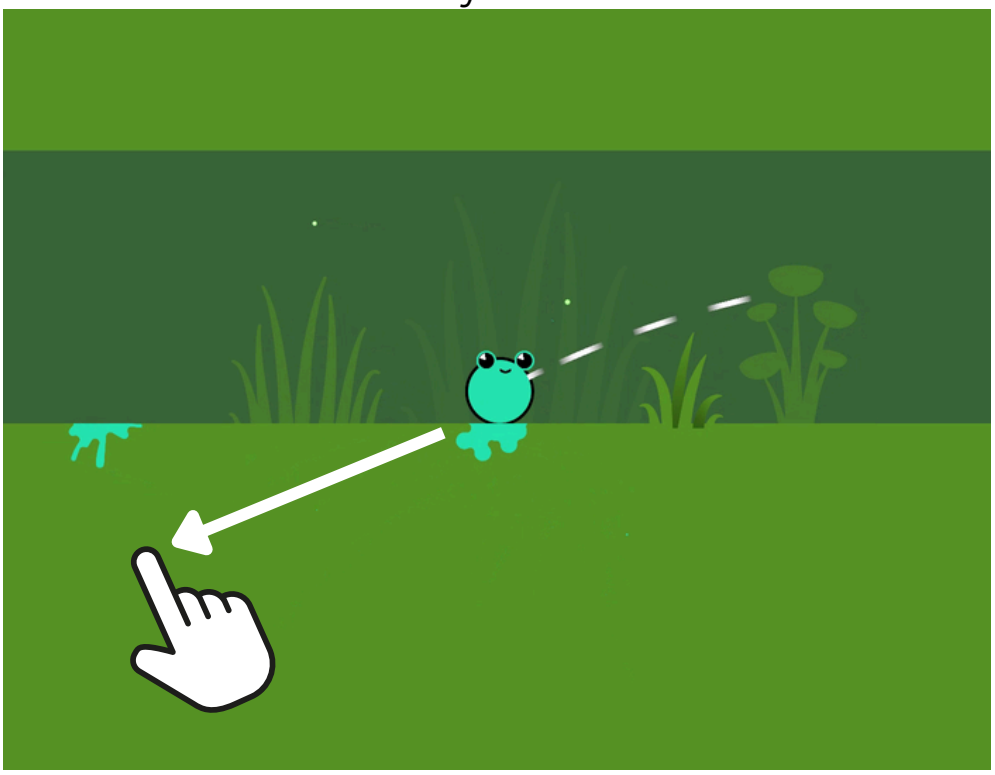
2- Once the new project opens, click Assets -> Import Package -> Custom Package and select the downloaded asset. If you are using the Unity Asset Store and have already purchased the package, click Window -> Package Manager (select My Assets) and search for the name of the asset.

3- Make sure to import everything. This will overwrite the project and add new layers, tags, and other settings.

About

The main scene can be found in the Sticky Frog Demo folder and is named Demo. To test the game, make sure to play from this scene.

Swipe in any direction and release to jump.
You'll stick to walls when you land.



Each Level needs the following prefabs to work:

- MainCamera with CameraFollow script attached to it
- Player
- Walls
- EventSystem to detect touch or mouse

Full Version

This is the demo for the player controls

If you want the full version that contains:
A complete main menu with level manager
A sound manager to mute music and/or sound effects
Loading screen animations while switching levels
10 pre-built levels
Other mechanics like collecting keys and opening doors
Enemies like spikes and moving razor spikes
A built-in system to save and load game progress.
User interface elements that automatically adjust to different screen sizes and orientations. (Landscape only)

You can get it from here

Download on the Asset Store
